Claims Payment Policy

Subject: Laboratory – Testing for Alpha1 Anti-trypsin Deficiency

Application: Medicare Advantage Products
Policy number: LAB2023052
Published date: 07/2023
Revision date: 07/2025

Disclaimer: *The intended audience of this medical claims payment policy is healthcare providers who treat Humana members. This policy is made available to provide information on certain Humana claims payment policies. This policy is a guideline only and does not constitute medical advice, guarantee of payment, plan pre-authorization, an explanation of benefits, or a contract. This policy does not govern whether a procedure is covered under a specific member plan or policy, nor is it intended to address every claim situation. Claims may be affected by other factors, such as: state and federal laws and regulations, provider contract terms, and our professional judgment. This policy is subject to change or termination by Humana. Humana has full and final discretionary authority for its interpretation and application. No part of this policy may be reproduced, stored in a retrieval system or transmitted, in any shape or form or by any means, electronic, mechanical, photocopying or otherwise without express written permission from Humana. When printed, this version becomes uncontrolled. For the most current information, always refer to the following website:* ***Humana.com/ClaimPaymentPolicies.***

Medicare Advantage Payment Policy

As a Medicare Advantage plan, we have developed payment policies to explain coverage more fully for services. The criteria outlined will apply to Medicare Advantage plans as outlined below.

In addition to this policy, claims payments are subject to other plan requirements for the processing and payment of claims, including, but not limited to, requirements of medical necessity and reasonableness and applicable referral or authorization requirements.

1. Serum quantification of alpha-1 antitrypsin (A1AT) protein (CPT code 82103) and A1AT phenotyping by isoelectric focusing or A1AT proteotyping (Pi-typing or protease inhibitor typing) for Z and S alleles by liquid chromatography-tandem mass spectrometry (CPT code 82104) **ARE ONLY REIMBURSABLE** in any of the following situations:

    - Individuals with emphysema, COPD, chronic bronchitis, bronchiectasis, or asthma
    - Individuals with liver disease
    - Individuals with necrotizing panniculitis
    - Individuals with vasculitis
    - Individuals with neonatal cholestasis
    - Family history of alpha-1 antitrypsin (AAT) deficiency or diseases of the blood and blood-forming organs or endocrine, nutritional, and metabolic diseases or genetic disease

Applicable procedures for Medicare Advantage plans

Procedure Code	Code Description
82103	Alpha-1-antitrypsin; total
82104	Alpha-1-antitrypsin; phenotype
